

Finance and Accounting for the Oil and Gas Industry Training

Description

Intorduction

This programme will provide you with a solid foundation in the financial aspects of oil and gas exploration and production (E&P). It will have immediate and practical application back at your workplace since all activities have financial implications for the assets, departments and ultimately the company for which you conduct your specialist activities. This five-day programme has been designed specifically for non-finance specialists in the oil and gas industries who need to understand the financial implications of the work they do. You will learn how to:

- Understand how your activities and decisions are reflected in your company's reporting to shareholders and other stakeholders
- Find out what happens to financial and economic data that is provided by you and your departmental colleagues
- Raise your level of confidence in working with financial information and interactions with commercial colleagues
- Prepare yourself for increased responsibility and a more strategic role in the management of your company

Objectives

- appreciate the financial impact of your day-to-day decisions and actions
- work more confidently and effectively with colleagues on financial matters
- improve the quality of information you receive from and provide to Finance
- increase the success rate of requests for authorisation of expenditure and make more effective use of funds allocated
- use departmental budgets and monthly management reports to help you exercise financial control of your area of operations
- understand the financial information disclosed in your company's annual report and accounts
- Learning throughout the programme will be reinforced by case studies, worked examples, and illustrative extracts from oil and gas company annual reports

Day One

The E&P Business and Project Economics

- The Business Environment
 - Business objectives
 - Stakeholders
 - Corporate governance
- The E&P Business
