

Radiation Safety – Safely Working with Radioactive Materials Training

Description

Introduction

This highly-interactive training course will provide you with all the necessary information and abilities to successfully understand both ionising and non-ionising types of radiation materials and, how to effectively manage these radiation materials safely and with confidence to ensure personnel health and safety and/or to prevent potential environmental impacts.

Most business sector (industry, commercial and service) organisations use, store and dispose of radioactive materials within their normal day-to-day business activities, these business sectors include:

- Oil and gas industry (offshore and onshore facilities)
- Medical facilities (hospitals and clinics)
- Service industries (laboratories, etc.,)
- Manufacturing companies
- Plus, many other business sectors
- Personnel need to be fully informed, trained and monitored to ensure they are not exposed to radiation materials during their work activities and/or when using, storing or disposing of radioactive sources.

This course will highlight:

- The various types and harmful properties of ionising and non-ionising radiation
- The importance and how to effectively carry out radiation exposure assessments
- Understanding key radiation safety management and protection principles
- The biological effects of radiation exposure to the human body

Objectives

At the end of this course, participants will learn to:

- How to carry out radiation exposure assessments

-
- How to define the two types of radiation
 - How to determine the effects of radiation exposure on personnel
 - How to develop and implement radiation control procedures
 - How to transport, transfer and dispose of radiation materials

The Course Contents

Fundamentals of Radiation Safety

- What is radiation?
- Types of radiation sources (ionising & non-ionising)
- Understanding risk from radiation
- Man-Made radiation materials
- Radiation materials used in industry

Effects of Radiation on the Human Body

- Units of radiation exposure and dose concentrations
- Radiation effects on Human Body
- Categorising radiation exposure effects
- Exposure to radiation (acute & delayed)
- Dose Limits of acceptable radiation exposure

Radiation Exposure Risk Assessment

- Key exposure assessment elements
- Determining potential radiation exposure pathways
- Identifying radiation exposure and short and long term effects
- Evaluating exposure durations and concentrations
- Estimating radioactive chemical and/or particulate impacts

Radiation Management & Control Procedures

- Security of radioactive materials
- Radiation exposure monitoring and detection methods
- Radiation protection solutions (time, distance & shielding)
- Laboratory radiation safety processes
- Radiation precautions and safety procedures

Radiation Management Principles

- Waste disposal of radioactive materials
- Transport and transfer of radioactive materials
- Safe procurement and quarantine of radiation materials
